Automation: Failed to Validate google search

Attach Add a child issue Link issue Create

Description

This bug is created through Automation, Detailed step by step execution and test coverage are present in the attached .zip file. Please download and extract the test-output.zip file for more details

Summary

Automation Test Script for the Scenario -Validate google search was failed during execution.

Details

Test Scenario: Validate google search

Environment: Linux

Steps to see Test Report:

1. Download the attached test-output.zip file attached to this bug

2. Extract the contents of the zip file

3. For HTML report open reports folder present inside test-output folder

4. Open Spark.html file for detailed view of execution dashboard and navigate through pages for step-wise and scenario-wise reports

5. For PDF report please open PdfReport folder and open ExtentPdf.pdf file

Expected Result:

Script should pass with all validations and no flow should work without breaking in-between

Actual Result:

Script failed please refer to the attachment for reason
